

**Vicky RIECH**  
**Director LOCKSS Program, Stanford University Libraries**  
**vreich@stanford.edu**

Victoria is Director and co-founder of the LOCKSS Program, Stanford University Libraries and a founding member of the CLOCKSS initiative. Via these programs the community is working to ensure a continued role for libraries. Libraries, if they are to retain their societal memory role, must continue to build collections. Librarians and publishers are working together via the LOCKSS and CLOCKSS programs to ensure this reality; to insure digital scholarly assets remain available for future readers.

LOCKSS has received support from NSF, the Andrew W. Mellon Foundation, Sun Microsystems Labs, Intel Labs, Hewlett Packard Labs, the Harvard Computer Science Department and Stanford University Libraries. Currently, librarians, including the Library of Congress and publishers are supporting the LOCKSS and CLOCKSS programs.

Prior to LOCKSS and CLOCKSS, Victoria help to start HighWire Press, the Internet imprint of the Stanford University Libraries. Founded in 1994, HighWire Press lead the scholarly journal move from paper to online. She also has extensive library experience in both public and technical services, including positions at Stanford University Libraries, National Agricultural Library; The Library of Congress, and the University of Michigan. She earned her MLS from the University of Michigan. For a list of publications and presentations see, [http://www.lockss.org/lockss/Vicky\\_Reich](http://www.lockss.org/lockss/Vicky_Reich)
