

It takes a community; saving today's heritage for tomorrow citizens
The LOCKSS and CLOCKSS Program

Victoria REICH

Director LOCKSS Program, Stanford University Libraries

vreich@stanford.edu

How will you ensure researchers have access to electronic content in the future? What happens when journals get sold, or lost in the shuffle of a merger? These questions vex librarians and publishers alike, but the LOCKSS Program and the CLOCKSS Initiative have answers. Libraries are using the LOCKSS Program to build digital libraries! With publishers, librarians are working to retain libraries as vital long-term memory organizations in a web world. CLOCKSS (Controlled Lots of Copies Keep Stuff Safe) is community governed endeavor working to guarantee everyone will have long-term access to digital materials regardless of ability to pay. Come learn who the key players are and how you can participate. This session is a must for anyone who wants to learn about a vital, robust and comprehensive effort to preserve the scholarly record for future generations.
