In recent ten years, the computer technology, networking, and communication have been developing and growing. The new knowledge delivering speed now has been assumed to the multiple growths. The traditional teaching has no longer been the only way to deliver knowledge. Because of the technology growing speed, the traditional teaching somehow cannot meet the needs of the modern technology world. Therefore, the implemented technology in instruction and the applied digital environment in promoting teaching quality/effectives have already become the important issues now.

Applying computer technology to teach Chinese instruction has already become one of the main teaching strategies, and the teaching outcomes have also been approved by more and more people. When Chinese instructions in the world have all implement with multimedia and have all reach to the developmental stage, the digital Chinese instruction in Vietnam is still pauses in the started stage. Therefore, the rationale of this speech is to focus on the computer application in Chinese instruction in Vietnamese university.

The objectives of this paper are included in the following:

1. What has been currently happened in the digital Chinese instruction in Vietnam?
2. How can a Chinese teacher apply computer technology to progress Chinese instruction?
3. How can a learner use computer technology to learn Chinese?
4. What are the suggestion and future perspectives of teaching application?
