In the past few decades, adoption of digital technology in schools has been evolving through three phases: technology adoption readiness, technology enhanced teaching, and technology transformed learning. In the forthcoming decades, however, in the adoption process, a few challenging problems will need to be resolved by researchers and practitioners. In fact, these challenging problems are not only for digital learning, but for formal school education in general. In this talk, I'll describe these problems and possible ways and strategies of resolving them
