rich.rosy@ingramdigital.com

E-Journal archiving solutions have been worked on going back to the mid 1990's, with solutions being put into place. Journal publishing is however different from e-books, in terms of the lifecycle of the data (both from a research and commercial perspective) and production. With e-books available through aggregators and from publishers, different solutions are being sought for e-book archiving that meet the needs of the library, publisher and the aggregator to enable continued access to content, irrespective of where the library might be located in the world.
